Education

Monash University — Melbourne, Australia
Bachelor of Computer Science Advanced

University of Texas at Austin — Austin, Texas
Bachelor of Science in Computer Science

Experience

Python Programming Bootcamp Tutor — July 2024, March 2025
Monash University — *Melbourne, Australia*

- Delivered structured Python programming sessions covering fundamental and advanced topics to enhance student engagement and comprehension
- Provided individualized mentorship and feedback while developing interactive coding exercises and instructional materials aligned with the curriculum to reinforce core concepts and support student learning

Digital Engineer — October 2025 – Present
Linquist — *Melbourne, Australia*

- Developed and maintained full-stack web features using Python, PHP, and WordPress, focusing on dynamic content rendering, plugin customization, and backend optimization
- Integrated third-party APIs including OpenAI, ElevenLabs, and Stripe for AI-driven content generation, voice synthesis, and payment processing
- Diagnosed and resolved production issues, optimized API requests, and implemented modular feature updates using Git for continuous deployment

Events Officer — March 2025 – August 2025
WIRED — *Melbourne, Australia*

- Collaborated with other club members and external partners to plan and execute events, while managing event budgets, tracking expenses, and negotiating with venues
- Organised and executed industry nights, workshops, and social events, enhancing engagement and networking opportunities for members

Projects

Finova Investment Platform | Link | *Python, Flask, JavaScript, AI/ML, HTML/CSS*

- Engineered a scalable, full-stack web financial analytics platform integrating the Alpha Vantage API for real-time and historical market data
- Implemented an AI-driven financial assistant by training a custom Ollama 3.2 model to provide precise, data-backed insights for complex finance-related queries
- Built an interactive portfolio optimization tool, leveraging financial modeling, linear programming, and predictive analytics to enhance investment strategies

Face Recognition Authentication System | Link | *Python, OpenCV*

- Developed a facial recognition system using OpenCV to verify user identity before granting access to a digital signature interface
- Integrated a dynamic signature module, enabling users to draw signatures with real-time color tracking and gesture-based input for an intuitive experience and store as png files

BevoGuard | Link | *Python, Flask, React, Javascript, HTML/CSS, MySQL, AWS*

- Utilized HTML, CSS, JavaScript, and Python to create a user-centric web application that helps new Texas residents track and understand neighborhood safety
- Employed real-time API integrations to scrape official city data, safety alerts, and curated resources, providing users with up-to-date safety conditions
- Optimized backend operations using Flask for managing data flow and MySQL/PostgreSQL for efficient storage and retrieval of incident reports

Completed Subjects

- FIT1045: Introduction to Programming
- FIT1008: Fundamentals of Algorithms
- MAT1830: Discrete Mathematics
- MTH1020: Analysis of Change
- FIT1047: Introduction to Computer Systems, Networks and Security
- MTH1030: Techniques for Modelling
- FIT1049: IT Professional Practice
- FIT1051: Programming Fundamentals in Java
- FIT2094: Databases
- MON2100: Global Immersion Guarantee Program
- FIT2099: Object Oriented Design and Implementation
- FIT2004: Algorithms and Data Structures
- FIT2083: Innovation and Research in Computer Science
- FIT2014: Theory of Computation
- FIT2021: Linear Algebra with Applications
- FIT2102: Programming Paradigms
- FIT3080: Artificial Intelligence
- FIT2086: Modelling for Data Analysis
